

Loading arm

for LPG as well as light and dark oil products

Products:	liquid and gaseous fluids
Dimensions:	Dimensions according to the customers wishes modified to the requirements of the plant
Dimensions:	from DN25 to DN200
Operating pressure:	up to 50 bar
Weight balance:	Spring tension cylinder Pneumatic cylinder Counterbalance
Operating temperature:	-180 °C to +250 °C
Certification:	Russia

Loading arms can be used not only for open but also closed loading and discharging of road tankers as well as rail cars.

The product portfolio of ETB includes top and bottom loading arms which we can modify to almost any requirement. To complement the loading facility we can supply steel elements, such as platforms and folding stairs. The smart and slim design ensures on the one hand safe and easy handling directly at the facility and on the other hand allows quick maintenance.

Compliance to international standards guarantees efficiency and safety of our loading arms. Just like other tests, such as pressure and X-ray testing. The complete equipment is produced in explosion proof design. We can also automatise the loading arm with suitable sensors.
